PROFESSIONAL SUMMARY

I am a Software Accessibility Tester at QualityLogic with hands-on experience catching WCAG 2.1/2.2 defects on web and mobile products. I graduated from Boise State with a bachelor's in Computer Science and I also helped tutor all the data structures sections over the span of 2 semesters. I have genuine interest in helping people, QualityLogic gives me that fulfillment with helping clients make their websites accessible to a wider audience. To paint a better picture about my drive for helping people, I was an Eagle Scout and my dad was one of my scout masters; being a boy scout had many opportunities for community service, my Eagle Scout Project was no different. We gathered donations for warm clothes, toiletries, and other hygiene products and we put them all in backpacks and handed them to the homeless shelter. We were able to collect 62 of these bags just in time for Christmas on the 23rd of 2016.

EDUCATION

Bachelor of Science in Computer Science

August 2021 - May 2025

Boise State University, Boise, ID

Dean's List

Methodologies & Tools: Agile/Scrum, WCAG 2.1/2.2, Section 508, xUnit, JUnit, QUnit, GitHub, Insomnia, VSCode

EMPLOYMENT EXPERIENCE

Software Accessibility Tester

November 2025 – Present

QualityLogic, Boise, ID

- Test web and mobile applications for accessibility compliance following WCAG 2.1, WCAG 2.2 and Section 508 standards using JAWS, NVDA, VoiceOver, Talkback and other tools.
- I have contributed to 18 accessibility audits across 13 different companies.
- Document accessibility defects and steps to reproduce for the development team.
- Regularly collaborate with developers and leads to help answer any and all accessibility questions.

Teaching Assistant – Data Structures

September 2024 – May 2025

Boise State University, Boise, ID

- Held weekly office hours and managed a Piazza discussion board for all four sections of data structures; each section having 25-30 students.
- The tutoring lab was very busy whenever projects were within a week of being due; during these sessions I had to cap my one-on-one time with students to make sure I got to talk to everyone at least once for at least 5 minutes.

PROJECTS

Accessible Portfolio Website – JavaScript/React

February 2026 – Present

- Building a personal portfolio website with WCAG 2.2 compliance as a priority to show what I've learned from my experience in accessibility.
- Analyzing each complex widget, ported from Bootstrap to ensure accessibility.

Wellness App - Dart/Flutter Capstone Project

February 2025 – May 2025

- Our capstone project was made using Flutter/Dart because our sponsor wants the end product to be cross-platform.
- The app 'gamified' the process of bettering a user's mental health journey by simplifying healthy habits into short mini-games.
- The games users would be prompted to play would be based off the on-boarding personality quiz; users have the option of retaking the quiz anytime.
- Firebase was used for user authentication and data storage.

Math Library - C#/.NET Individual Personal Project

June 2025 – August 2025

- To get my hands dirty with C#/.NET, I developed a math library with a focus on unit testing using xUnit to become familiar with the language and framework; I did not utilize any pre-made math libraries.
